

DocuWare REST Samples - How to work with Postman

What is Postman?

It's an API documentation/testing tool.

All information about this tool can be found at <https://www.getpostman.com>

Where to get it?

<https://www.getpostman.com/downloads/>

How it works?

<https://learning.getpostman.com>

Fast start

https://learning.getpostman.com/docs/postman/launching_postman/sending_the_first_request

Working with collections

1. Open Postman
2. Click on import (left upper corner)
3. Choose our sample collection: *DocuWare_REST_Samples.postman_collection.json*
4. It should appear on the left part of the postman screen, if not go to "view - toggle sidebar"

The DocuWare REST Collection

Most of our basic REST Requests (partly also the responses) are gathered in this collection.

All URLs are provided with environment variables.

To fill those variables you can import our sample environment

DocuWare_REST_SampleEnvironment.postman_environment.json on the right upper corner.
